

Engineering operational software that lasts.

Forgestack Labs is a founder-led software engineering company based in Mangaluru, India, building custom

1. What we build

Operational software for offline-first billing, inventory, reconciliation, and field workflows.

Enterprise SaaS products for secure, measurable, multi-tenant operations.

AI automation for documents, support, and decision workflows with human controls.

Custom platforms for organizations with complex operational requirements.

Remote software delivery for companies in India and international markets.

2. Delivery model

Discovery and operational mapping.

Architecture and risk review.

UX prototypes and acceptance criteria.

Iterative development with continuous QA.

Deployment, observability, and support.

3. Flagship capability

Fuel OS is an offline-first fuel retail platform connecting billing, stock, credit, shifts, reconciliation, and management reporting.

4. Engage us

Product deployment, custom engineering, and architecture consultation.
