

Enterprise SaaS Readiness

Whitepaper - 14 min read

A technical checklist for tenancy, permissions, security, observability, support, and commercial scale.

1. Tenant and identity boundaries

Use this section to evaluate tenant and identity boundaries, including operational constraints, architecture boundaries, evidence, ownership, and failure handling.

2. Permission architecture

Use this section to evaluate permission architecture, including operational constraints, architecture boundaries, evidence, ownership, and failure handling.

3. Security and audit controls

Use this section to evaluate security and audit controls, including operational constraints, architecture boundaries, evidence, ownership, and failure handling.

4. Billing and integrations

Use this section to evaluate billing and integrations, including operational constraints, architecture boundaries, evidence, ownership, and failure handling.

5. Support operations and observability

Use this section to evaluate support operations and observability, including operational constraints, architecture boundaries, evidence, ownership, and failure handling.
